MD's Message

Joseph John
Managing Director, Owner

We are a Dubai Municipality-approved and accredited specialized cleaning service provider. Established over a decade, we aim to provide high-quality services and make our mark in the robust cleaning industry in the UAE.

The rapid development of Dubai and the UAE prompts effective sustainability programs focusing on preserving the environment. We offer environment-friendly services and constantly monitor our operation's environmental aspects and impacts.

We endeavor to provide complete customer satisfaction by adopting the latest technological advancements through acquiring state-of-the-art equipment, implementing scientific methodologies, and employing highly competent personnel. International standards govern our operations, and we hold certification for our Integrated Management System that includes ISO 9001:2015, ISO 14001:2015, and ISO 45001 2018.

We attribute our success to the efficiency and professionalism of our Management and Staffs. However, we strongly believe in the principle of "Doing it right the first time" and that our resolve towards excellence is fused with the conviction that ***"Everything is possible."***

About Us

Our mission at RONS Enviro Care is simple: to provide high-quality services for our valued clients.

Our team goes above and beyond to cater to each project's specific needs. Through open communication and exceptional service, we hope you'll find what you're looking for with our Cleaning and Facilities Management Services.

RONS Enviro Care LLC was established in 1997 with its grease trap cleaning service in UAE's fast-developing economy. Environmental changes were imminent, requiring the specialized cleaning industry to play a significant role in safeguarding the environment. With this anticipation of a massive volume of business opportunities, RONS started to venture into other technical cleaning activities such as water tank cleaning, drain line jetting, and sewage tank cleaning services. Through further growth, RONS integrated more services in line with our core business, including AC duct cleaning, kitchen exhaust system cleaning, and others. In addition, with the ever-growing scope of work, RONS ventured into the facilities management side of the sector, complementing our already established line of services.

Coupled with additional services like CCTV Inspections of pipelines, we at RONS have offered our clients a complete package of specialized and facilities management services to cover all eventual needs. As a result, as of 2021, we have collected and disposed of approximately 490 000 gallons of FOG waste per month, making RONS the most prominent collector and disposer of grease trap waste in the Emirates.

RONS Enviro Care, one of the oldest specialized cleaning companies in the UAE, is ISO (ISO 9001 2015, ISO 14001 2015, ISO 45001 2018) certified, and a three-time awardee of the Dubai Municipality Appreciation Awards. In addition, in early 2021, RONS was awarded the MECHF (Middle East Cleaning, Hygiene Facilities Awards) Specialized Cleaning Company of the Year and Excellence in Grease Trap Cleaning.

Looking to the future, in addition to our branches within Abu Dhabi and Sharjah, we hope to expand our services across all other Emirates further, wherein the registration process has been initiated.

Furthermore, The Company aims to continue providing quality services for our customer's satisfaction.

Our Services

We're proud to provide community members with top-notch service. Our clients love working with us, many of them returning as repeat customers. Get in touch to let us know what we can do for you today.

RON'S Enviro Care LLC is committed to getting the job done, especially when it comes to this service. You can count on us to be professional, timely, efficient and make sure you're satisfied every step of the way.

AC Duct Cleaning

AC Ducts are susceptible to contaminants and significantly contribute to diminished indoor air quality. Dust, dirt, pollen, animal hair, and other airborne pollutants pulled in during the air conditioning system are spawned out through the vents circulating within the building or structure.

How RONS can help you?

RONS provides the most comprehensive cleaning and disinfection program with the latest technological equipment and an in-depth work sequence and implements measures to reduce identified risks and hazards according to existing local and international standards. Depending on accessibility, the cleaning methodology may include utilizing a roto brush mounted on a Tractor Vehicle / Robot. A vital feature of this device is its video graphics capabilities providing real-time inspection of images and videos during duct cleaning. Additionally, the process includes negative air pressure and HEPA filters.

As part of our support services, RONS assist in conducting Indoor Air Quality Test subject to clients' approval.

RONS can perform the following:

- Cleaning and disinfection of the supply and exhaust AC ducts using HEPA filters and agitators (wipers)
- Conduct before and after air quality tests by DM accredited 3rd Party Laboratory
- Work photos and videos of the cleaning activities and associated After Service Reports will be provided upon completion of the work

Before

After

KES Cleaning

A Kitchen Exhaust System (KES) is a system that allows the safe extraction of cooking emissions directly at the cooking station before they are allowed to mix/contaminate the surrounding air. The emissions are drawn into the kitchen hood by the exhaust fan, drafted through the ducting to an ESP (Electrostatic Precipitator Filter) or Ecology Unit, and omitted out of the kitchen/building as cleaner air.

How RONS can help you?

RONS offers an unrivaled kitchen duct and exhaust cleaning service, ensuring safe and hygienic usage. Our ability to deliver flexible timings with efficient and powerful cleaning techniques ensures your kitchen does not suffer.

Benefits of Kitchen Duct and Exhaust Cleaning

- Hygienic environments
- Fire deterrents
- Good, clean air flow
- Quick and professional service

Before

After

Water Tank Cleaning

A water tank is a container for water storage for domestic and industrial uses. Among these applications are emergency fire suppression, irrigation, and the provision of drinking water and faucets for cleaning. Water storage tanks come in a variety of shapes and sizes. It can be horizontal, vertical, underground, potable, or made from steel, stone, fiberglass, or concrete. However, increasing corrosion and leakage in the water tank and bacterial growth pose threats to the tank.

How RONS can help you?

RONS specializes in providing Water Tank Cleaning and Disinfection Services according to Dubai Municipality Guidelines for the Control of Legionella in Water Systems issued on 25th June 2010.

Benefits:

- Clean and safe water supply
- Effective in stopping the spread of disease and bacteria
- Deep clean solutions

Other services:

- Cleaning and disinfection of hot and cold water systems.
- Flushing of hot and cold water networks.
- Chlorination or equivalent chemical disinfection of water systems.

Sample before and after photos.

Before

After

Sewage and Sump Pit Cleaning

Sump/Sewage pits are holes designed to catch water and other spilled fluids. They are most commonly found in basements, where the pits dry the water away from the rest of the basement to prevent flooding. The presence of sludge in the sump pit/lift station will result in blockages and cause the sump pump to malfunction. These wastewaters may also contain disease-causing germs and pollutants that must be treated to protect human health and the environment. Thus, regular cleaning of the pit/tanks is required to ensure that it continues to work as it should.

How RONS can help you?

RONs offers affordable, convenient, and efficient alternative cleaning services for sump pits, lift stations, and sewage tanks of various types, sizes, and depths. The company's vehicles have been innovatively designed to operate in areas with limited workspace and vertical clearance. With RONS, you can have your property's sump pits, sewage tank cleaned, and garbage hauled away.

Reasons for cleaning:

- Reduced pump damage - due to fewer waste deposits
- Free-flowing waste
- Overflow and contamination

Extra services that RONS can perform:

- Waste water removal
- Cleaning of septic tanks
- Blockage and drain clearing

Sample before and after photos.

Before

After

Drain Line Jetting

A drain line jetting process involves using high-pressure water streams through specially designed nozzles to dislodge and clear obstructions of a sewer and drain line, as well as performing regular maintenance to avoid sewage backups. It is now known to be good at cleaning and preventing blockages in water lines and sewer lines – it can even prevent tree roots from breaking in.

Whatever the location is, drain line jetting is essential to keeping drains and sewer lines in optimal condition, preventing damage and mitigating further deterioration.

How RONS can help you?

RONS is equipped with high-pressure cleaning solutions and state of art Drain Line Jetting units ready to solve clients' blocking/clearing problems. Can clean and remove blockages/debris from drainage networks with pipe diameter (ranging from DN 75 mm up to DN 2000 mm through all sectors commercial, residential/domestic, and industrial (Oil and Gas)

Furthermore, our experts are highly qualified and trained technicians always ready to help in clearing/cleaning any blocked or clogged pipelines throughout the Emirates.

RONS can perform the following services;

- Drain blockages (Floor Traps, Sinks, Shower, etc.)
- Soil waste (Manhole blockage, etc.)
- Grease blockage
- Concrete, screed, other hard blockages
- Other building materials
- Full system cleaning

Grease Trap Services

Head Office: RONS Enviro Care Building,
Industrial Area 1, Ras Al Khor, PO Box 52580, Dubai, UAE
Toll-free: 800-RONS (7667)
Email: info@rons.ae

Grease Trap Cleaning

Grease Trap acts as a filter to remove fats and oils from water before entering the municipal waste system. Since fats and oils can clog a sewer system, using a grease trap ensures that the sewer system runs smoothly.

A grease trap looks like a large box or barrel spliced into the water drainage line. When the water enters the grease trap, it cools down, allowing the lighter oil to precipitate out to the top. A series of baffles in the grease trap collect oil and chunks of material while the water sinks to the bottom. An exit pipe at the base of the grease trap allows the treated water to flow out while the grease remains enclosed on top.

Why Grease Trap is cleaned?

A grease trap will lose efficiency if it is not cleaned regularly. It is possible for the grease trap to clog eventually, resulting in water backups into the kitchen. To ensure that the grease trap operates at peak efficiency, a cleaning rotation and log are usually maintained. In addition, health inspectors may periodically inspect the grease trap to ensure that it works properly and that all water in the establishment is treated before draining into the sewer.

How RONS can help you?

- Removal, cleaning, and disposal of grease, wastewater, and solidified elements from the grease trap
- Providing the grease trap dosing system helps slow down and stop clogging.
- Installation and supply of grease traps equipment
- Assessment, supply, and maintenance

Sample before and after photos.

Air Conditioning and Ventilation System

Air Conditioning and Ventilation System (Installation, Repair, and Maintenance)

The fast-paced development & technological advancement in today's infrastructure systems include air conditioning units, ventilation systems, pumps, heat exchangers, chillers, cooling towers, and lifting units. etc., demands the service of highly qualified experts to suitably address the sophisticated systems.

Benefiting from long years of experience in the specialized services segment and facility management industry, RONS FM provides our clients with the most reliable services according to our core principle of excellence. In addition, we offer highly trained experts who strive to exceed our client's expectations.

Air Conditioning and Ventilation Services:

- Installation, Maintenance, and Repair
- Retrofit Works
- 3rd Party Inspection
- Cooling Tower Maintenance and Disinfections
- Walking Chillers/Freezers Maintenance and Retrofit Works
- Air Balancing (Exhaust, AC, etc.)
- Duct Fabrication

Electrical and Plumbing Services

A building's MEP (Electrical, Plumbing) system acts as its brain. Their responsibility is to make a building livable and pleasant. It is imperative that a repair and maintenance team be involved in such cases to ensure the structure's functionality. RONS FM is the answer to every MEP service concern your company or home might have.

Our highly skilled and well-trained workforce can execute the most complex tasks and methodologies specifically designed for each project requirement. RONS FM ensures that your infrastructure, equipment, and facilities are well taken care of, ensuring optimal performance and efficiency.

We offer our MEP and Civil Works services in new building projects, fit-outs, retrofits, renovations etc.

Electrical Services

- Testing of Transformer, Relays, and Cables
- Laying and termination of High Volt Cables
- Switchgear
- High and Low Voltage Transformers
- Electrical Control Works

Plumbing Services

- Water Heater Installation
- Bathroom Plumbing
- Kitchen Plumbing
- Pipes and Radiator Repairs
- Water Pump Repairs
- Leaks and Overflows Services

Generator and UPS Services

Among our power system services are generators and UPS (Uninterruptible Power Supply). We are not just committed to keeping clients' power supplies running during blackouts and brownouts. Furthermore, we strive to improve the sustainability and green energy credentials of your company.

Our technicians have calibrated skills and deliver well-polished output on every project.

Commercial Kitchen Equipment and Air Conditioning Solution

The trust of major UAE group companies has made RONS Facilities Management one of the region's leading suppliers of Commercial Kitchen Equipment and Air Conditioning Systems.

With calibrated, experienced technicians, RONS delivers a well-polished output on each project.

Services offered by RONS:

- Installation and Maintenance of KES (Kitchen Exhaust System)
- Installation and Maintenance of all Kitchen Equipment including LPG Central Gas Line
- Air Conditioning Unit Installation, Repair, Maintenance, and Routine Service
- Ducting Works
- Installation and Maintenance of Cold Room/Storage, Chillers, and Refrigerators

Civil Works

Our company specializes in remodeling, renovations, and repairs for homes and offices. We work with clients to ensure that ergonomics are incorporated into the space. In addition to design phases, floor planning layout, implementation, construction, commissioning, testing, and maintenance, we also provide total fit-out solutions. With swift turn-around and artistry, RONS FM specializes in providing workstations, customized tables, sleek shelves, and cabinets. You can rely on the RONS FM team to ease the burden of building or renovating.

A range of services provided by our skilled professionals, including but not limited to:

- Carpentry
- Masonry projects (Construction / Demolishing)
- Design, install or repair drop/false ceilings
- Construction soffit, build decks or staircase
- Painting requirements (external or internal)

Infrastructure Services

Our Facilities Management Services can establish and create an explicit requirement expressed by our clients, including maintaining existing facilities through our vast experience in specialized services. We are experts in the upkeep of installed assets such as pipeline networks, signboards, lighting, water features, etc.

We are committed to ensuring that your daily operations are streamlined as we assume responsibility for managing the various infrastructure aspects of the business.

CCTV Pipe Inspection

CCTV pipe inspection is a highly advanced, fast, effective, and safe technology that can perform compliance inspections on pipelines and drainage/sewage networks depending on pipe size, material, and condition. Using easy-to-navigate mainline and pushrod cameras and a high-speed crawler, it can pass through debris, obstructions, offsets, and curved inverters to pinpoint faults and blockages in pipes.

Periodic inspection of pipelines and drainage/sewage networks ensures the integrity of the sewage system. In addition to horizontal components of a drainage network, our services include the verification of vertical risers of buildings. Like several of our services, the technology and methodology implemented for CCTV Pipe Inspection have various residential, commercial, and industrial applications. The inspection scope includes different pipe sizes with a diameter ranging from 25mm - 1,000mm.

RON'S Enviro Care utilizes the latest in pipe and drainage inspection survey technology. This technology allows us to provide our clients with the best pipeline inspection and reporting available.

CCTV Drain and Pipeline Surveys can highlight a variety of issues within pipe networks, such as:

- Root infestation
- Blockage locating and identification
- Network mapping
- Structural defects (leaks, collapses, etc.)

Benefits of CCTV Investigations can also provide needed information on:

- Illegal connection tapping
- Knowledge of unknown networks
- Mapping solutions Use

Use in a wide variety of drainage networks, such as:

- Sewerage
- Storm Water
- Irrigation
- Combined (Soil and Waste Water)
- Riser Instances
- Other difficult-to-inspect spaces

CCTV Inspection equipment is suitable for Diameter (DN) sizes ranging from DN25mm to DN1500mm

Pipe Rehabilitation Solution

Pipe Rehabilitation is essentially repairing pipes without the need for excavation. It is a pipe repair within an existing pipe. Using NDT (Non-Destructive Testing) Practices, RONS can repair defective pipes under existing infrastructure, in most cases without shutdown. We can use this service in various instances, such as groundwater infiltration, root infestation, cracked or damaged pipes, and much more.

The technology uses fiberglass or felt material, impregnated and secured to a tailor-made packer that is then pulled into the defective area.

From there it is inflated to cover this defect up to a pressure that allows the impregnated material to press against its host pipe (defective pipe) and is held there until this repair has cured.

Once cured, the packer is removed, leaving the newly installed material - the repair section - firmly and permanently in place.

These applications cut down the dependency on excavations and in most cases only need two points of access to pull the repair to cover the affected area.

We at RONS assess each leak, crack, misplaced joint, or other such pipe defect using CCTV Inspection Surveys and design a bespoke CIPP Repair (Local Patch Repair) to suit each client's needs. We pull a new repair over the found/existing defect to create a new, defect-free pipeline – all without the need for costly excavation and infrastructure disruption.

Pipe Rehabilitation Solution

Where is this used?

- Under Road infrastructure
- Under buildings
- Water features

Suitable for:

- Groundwater infiltration
- Root infestation
- Leaking riser
- Open joint issues
- Pipe modifications

These pipe repairs are applicable to most pipe materials, such as:

- uPVC
- HDPE
- GRP (Glass Reinforced Plastic)
- MS (Mild Steel)
- SS (Stainless Steel)

Through diameter sizes ranging from DN50mm to DN1000mm

In conjunction with these methods, CCTV inspections and Pipe Cleaning services are essential. These services are required as part of the full scope when performing any repair. The CCTV inspection element is performed before the cleaning and repair work to properly locate and confirm a defective point.

From here, preparations are needed prior to installation by cleaning the affected area, whether it is through high-pressure water jet cleaning or other methods. These processes are a mandatory requirement to enable the repair to be installed, cleanly and successfully.

Swimming Pool Repair

RONs Enviro Care can carry out surveys and repairs without draining the pool. Therefore, there is no downtime and associated costs such as draining, refilling, and chemical replacement.

A RONs dive team is composed of experienced and certified divers who are capable of performing the job quickly and efficiently. They are all equipped with high-tech diving equipment, making them safe and able to handle the job accurately.

RONs diving team can perform the following services:

- Underwater survey and inspection
- Underwater Tiling Works
- Underwater Grouting Works
- Pool Grilles
- Miscellaneous Pool Works
- Swimming Pool Installation

Commercial Diving and Marine Services

RONS offers a wide range of commercial and marine diving services ranging from shallow to deep-water exploration. Additionally, we can perform high-quality underwater inspections and confined space inspections. All our personnel dispatched were trained and experienced in the said field.

RONS diving team can perform the following services:

- Surveys, Inspections, and Maintenance
- Civil Engineering and Maritime Construction Support
- Underwater Mechanical Works
- Shipping, Marine, and Survey Works

Why Choose Us?

RONS is a long-running cleaning company in UAE. Its extensive experience in the market has developed a good relationship and a reputation for good quality and good service, enticing clients to stay.

With a vast array of technical equipment and a highly trained workforce, RONS can cater to the client's needs on time and provide quality resolutions. In addition, RONS has a vast fleet of service vehicles that could reach the far points of the UAE.

RONS have a customer service team standing by 24/7 to accommodate clients if they have any questions or need immediate assistance. The RONS team was competent to react logically to any situation and deliver an urgent response.

Compared to the previous year, RONS has increased staff numbers, partly in line with administrative needs. It enabled the company to provide clients with a quicker turnaround in report delivery, more effective communication, and efficient accounting.

SUPER SUCKER: THE MOST POWERFUL INDUSTRIAL VACUUM UNIT

In a drive for further efficiency, quality, and safety, RONS' Specialized Cleaning Division has acquired the latest, most powerful, and state-of-the-art equipment as part of its ever-evolving service.

The unit described as one of the most powerful commercial vacuuming unit allows the team to perform large-scale tank cleaning with efficiency and ease. This is made in part by the sheer power of the trailer-mounted vacuum unit that gives the team the capacity to clean tanks up to a depth of 35m in some cases, as well as remove a large amount of debris within a short period of time.
